THE UPWARD SPIRAL WHITE PAPER & COMMERCIALIZATION PLAN...2022 & 2024

“THE UPWARD SPIRAL”

Our next generation starts with the youth and begins with the open opportunity to learn and explore. We believe our vision will spur growth in HUB Zones in architecture, technology, and education. Beginning with these HUB zones, it is our mission to provide an open advantage to minority American youth and citizens of all ethnicities. Phase I SBIR funding will allow IMP to implement our foundation locally and set our company up for public commercialization. We intend to broaden the vision of our planet neighborhood by neighborhood and do so by placing the bigger picture in a futuristic frame, literally! “Innovation can start anywhere” encompasses everything our research is about. Iron Monkey Productions seeks to set a catalyst to bring forth innovation through industry using futuristic concepts manufactured by scientists, engineers, and researchers. With the help of SBIR seed funding and STTR development, we plan to implement this by globalizing the commercialization of our ideas throughout the industry. We seek seed funding to expand the vision of Iron Monkey Productions and open the industry to the less privileged by creating jobs and getting youth interested in STEM AI and the future leading into 2050. Our purpose is to create new forms of manufacturing through innovations and discoveries to cut through the red tape and bring new products and services to market. To move the future forward globally for all humankind.

“The Upward Spiral” – *Keeping Our Growth Exponential*

Contributors: Nadean Talley, HC Roberts

Present-day socioeconomic obstacles require a new level of thinking. Any advancement of historical significance requires a progression not yet seen; not only does it project a new mindset but spurs the opportunity for newer, and more futuristic innovation. The global consciousness is always shifting with each era to come. The necessity of the human mind is to avoid stagnancy. We are always converging next-generation solutions as our needs evolve bringing forth new agricultural and socioeconomic prosperity. Advancement in the way we regard shapes and forms around us will procreate a revolutionary fresh perspective on the modern-day human mind. Our current advancements are dynamically exponential; our next big thing must provide monumental change to pave way for new laws of universal proportion to grace humanity with a new vision.

Vi·sion (vīzh'ən)

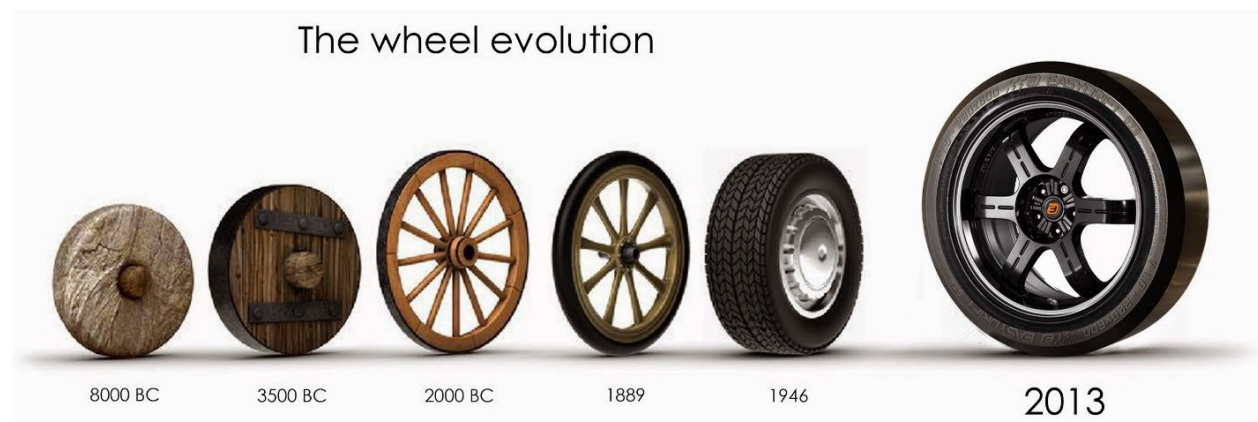

- The faculty of sight • the way one conceives something • intelligent foresight, unusual competence in discernment or perception • a picture in the mind • a mental image produced by the imagination

“An Amazing Race”

“The scientists of today think deeply instead of clearly. One must be sane to think clearly, but one can think deeply and be quite insane.” --- Nikola Tesla

It is essential to focus on the thought process of modern-day humanity to create a better, brighter, and more creative future for us all. We must utilize our minds better for problem-solving and deep progression and development, instead of simply reiterating previous generations of thought. The significant problems we face cannot be solved by the same level of thinking in which they were created.

Over the last 10,000 years, the same four-cornered, flat vision has led world innovations to a stagnant breach. Reverse engineering has made reiteration more common than not, and everything has been ‘boxed’ out. Little by little making the dimensional shift from 2d to 3d and 4d aspects in our surroundings can effectively bring a new way of thinking as did the circular wheel in the era of the indigenous human. It was the beginning, now we have the wheel and its inspirers. History has been repetitive with this pattern, sparking new changes each time.

Catalysts set the stage for each generation, beginning an ‘amazing race’. New technological advancement, job opportunities, brand new processes, and next-generation solutions emerge, as well as a *new class of products*. These products, never yet seen and seldom imagined, will **pivot** our imaginations by terms unbeknownst. These *Pivotal point products* will propel us into our new era, the next Golden Age of Technology. Genius reform to our current vision will spark a new age of true innovation and creative process.

“Mind Over Matter”

In theory, the human mind should begin to follow a new pattern of thinking using a dimensional perspective which will be a totally new application in this generation. Everyday reality should encompass intellectual challenges. Evolutionary innovation should spiral humans toward top potential, and it is necessary to revise our ways to make change count, and literally put the mind over the matter and create things never seen yet in this lifetime.

Technology brings convenience. Yet seems to lack motivational inspiring force. Each year technology is integrated more into our daily lives; however, it is learning more from us than we are from our own creations. A technological advance that can pivot your mindset, while bringing convenience and inspiration; *imagine that...*

Imagine...

Having a worldwide view personalized to your identity. This is not a portable device, but an interactive portal, a three-dimensioned transformer. A stationary e-transport vehicle. It can recognize you individually and has its own intelligence. Dual-modeled. At one moment it is a piece of artwork in the office or a TV screen at home, or a billboard over the city...then in an instant you are life--Broadcasting across the globe, telecommunicating with your business partner in France, viewing headlines news for Tokyo, checking the details on a local Amber Alert, or whatever your mind conjures, because it is all a reality with the world at your feet as you gaze through the viewport of the universe. Convenience and luxury all in one. An advanced techno- artistic innovation bringing Personal and commercial assistance on a broad scale; both locally and globally. Communications have been improved upon since the dawn of time from spoken languages to tele- and E-devices. The next big thing since the World Wide Web is WWV: The 3- D visual portal. This information is currently proprietary only to the owner and his team members as a real-time live face-to-face dimensional global Tele-a-Portal for meeting advertisement person-to-person conversations photography, entertainment, and more. IMP's initial client base is the Federal, State, and Local governments, Global governments, department stores, furniture stores, art galleries Architects, and engineering industries.

“A Vision of the Future”

In seven years, technology will have improved one million times since the year 2000. The changes to come will be disruptive to current products, archetypes, business plans, and current models, structures, and systems without change. There will be new expectations to meet; the mission of IMP is to revise old, outdated business visions and reset the organizational foundations in futuristic concrete mindsets

Our purpose is to create new forms of manufacturing through innovations and discoveries to cut through the red tape and bring new products and services to market made in the United States and its territories. To move the future forward globally for all humankind. IMP seeks to set a catalyst for AI and software technologies, and in doing so bring forth innovation through industry using futuristic concepts manufactured by scientists, engineers, and researchers and the everyday citizen; taking the world by storm as did the cellular phone industry and in the 30s 40s 50s and 60s the computer right now the cell phone. Not only will it open the industry to the less privileged by creating jobs and grabbing youth interest in artificial intelligence (AI) software-driven technologies and overcoming learning disparages through infotainment and STEM.

In doing so it is possible to increase our workforce by between 15 and 20 million by 2035, there will be a huge impact on the workforce for many years to come on multiple levels from field positions to lab and research positions in labor maintenance AI mechanics painters home care workers teachers doctors and more through STEM infotainment models, to administrative positions, marketing, and so on from the raw form of our materials to the production line and create commercialization by the common man and woman. Giving life to our vision will provide benefits economically in the workforce and directly impact the quality of life of the individuals involved. IMP will set the stage for years of technological graduation with opportunities for collaboration through our specialties and companies which share our vision.

Administrative Services and Reseller Services

Iron Monkey Productions seeks to provide **Smart Power** modules for Small Businesses and Governments. These will revise old, outdated business visions and reset the organizational foundations in futuristic concrete mindsets. Prep for the new millennia is essential to ensure a company's progression and secure an *Upward Spiral* momentum. The Company Provides Business Development Training, Grants and Bid Solicitations Submissions, Administrative Management Profiles, and Procurement of Products and Services. Entity and Government Consulting Services and connects private Entities to all Federal Government award systems.

We aim in our research and development category to create new forms of manufacturing through innovations and discoveries to cut through the red tape and bring new products and services to market, moving the future forward globally for all humankind. IMP seeks to set a catalyst, and in doing so bring forth innovation through industry using futuristic concepts manufactured by scientists, engineers, researchers, and the everyday person; taking the world by storm as did the cellular phone industry. In the 30s 40s 50s, 60s, and 70s America made monumental changes and adjustments to be a global leader in the post-COVID-19 transition period America will repeat the accomplishments we made in the past. We aim to repeat the progress made for an exciting future for our country. Not only will it open the industry to the less privileged by creating jobs and grabbing youth interest in artificial intelligence (AI) software-driven technologies and overcoming learning disparages through infotainment and STEM.

This will open the industry to the less privileged by creating jobs and grabbing youth interest in Science, Technology AI software design AI mechanics AI design AI installations software creations visual training, and instructions in an inclusive community environment, It is necessary to revise our ways to make change count, and literally put the mind over the matter and create things never seen yet in this lifetime. It is time to challenge the mind of scientists and engineers and even the entire way we know the science and how we construct and build to spark an

increase in our intelligence rather than reinvent and call it innovation. We have proven grand quality with an established client base and growing global partners and are establishing perfect positioning to plant both feet firmly into the growing post-COVID-19 transitional technological era.

NAICS Primary| (236220) Commercial and Institutional Building Construction (423510) Metal Service Centers and Other Metal Merchant Wholesalers.
